**CSCI 2040 A/B: Introduction to Python** **2018-2019 Term 1**

# Lab Assignment 3

Instructor: John C.S. Lui and S.H. Or Due: 23:59 on Fri. Oct. 19th, 2018

## Notes

1. You are allowed to form a group of two to do this lab assignment.
2. You are strongly recommended to bring your own labtop to the lab with Anaconda and Pycharm installed.
3. **Python 2.x** and **Python 3.x** are both acceptable. But you need to specify the python version in requirements.txt. For example, if your scripts are required to run in Python 2.7, the following line should appear in requirements.txt:

   ```
   python_version == '2.7'
   ```

4. (Not recommended.) Use the Windows PC in SHB 924 with your CSDOMAIN account. Login and open "Computer" on the desktop to check if an "S:" drive is there. If not, then you need to click "Map network drive", use "S:" for the drive letter, fill in the path `\\ntsvr6\userapps` and click "Finish". Then open the "S:" drive, find the **Python2** folder, and click the "IDLE" shortcut to start doing the lab exercises.
5. Your code should only contain specified functions or classes. Please delete all the debug statements (e.g. print) before submission.

## Exercise 1 (20 marks)

Using lists, write the function `unique(list)` that takes a list `list` as argument. It returns a list which all duplicated elements have been removed. All elements in return list should be in the same order as their appearance in the original list . For example, given the input ['a', 'b', 'c', 'a', 'b', 'd'], the function would return ['a', 'b', 'c', 'd'].
Your program should contain the function with format shown as below:

```
def unique(list):
```

Save your script for this exercise in `p1.py`

## Exercise 2 (20 marks)

The quicksort algorithm is a recursive algorithm that works by selecting some element, termed the pivot; dividing the original list into three parts, namely those that are smaller than the pivot, those equal to the pivot, and those larger than the pivot; and recursively sorting the first and third, appending the results to obtain the final solution. Write a quicksort method

that accept a `list` of numbers and use ***list comprehension*** to construct the method. Note that you need to sort the numbers in ascending order .
Your program should contain the function with format shown as below:

```
def quicksort(a):
```

Save your script for this exercise in `p2.py`

## Exercise 3 (60 marks)

The given file `dept-prof.pydata` contains data about school departments and their corresponding professors.
Note that you need to place the data file to the same directory hierarchy as your script for this exercise. When reading a file, you should avoid the crash of your program in case that the file does not exist. (Hint: you may use `try...except..` statement). And you should include all the data files `*.pydata` for Exercice 3 when you submit lab 3 (see `Submission rules`).

(a) We can use `pickle` to do data storage and retrieval. Implement a function that takes the name of data file (e.g., `dept-prof.pydata`) as argument, through which we can load the given data file `*.pydata` to a `dictionary`, where the keys are names of the departments and the value to each key is a list of professors who work for this department. And the function should return the `dictionary` load from `*.pydata`.**(15 marks)**

Your program should contain the function with format shown as below:

```
def load_data(file):
```

(b) Implement a function that takes a professor's name as argument (case sensitive), through which we can query which department(s) he/she works for. And the function should return a `list` of department(s). **(15 marks)**

Your program should contain the function with format shown as below:

```
def query(prof_name):
```

(c) Imagine that it is year 2028, and the school want to establish some new departments and remove the outdated ones. Implement a function including following operations to the dictionary we get from `dept-prof.pydata`.

- remove the old department `Artificial Intelligence`
- add a new department `Space Engineering` with professors `Musk`, `Andy` and `Jane`
- use `pickle` to save the updated dictionary to the same directory hierarchy as your script for this exercise as file `dept-prof-updated.pydata`

There is no need to return anything. This function will be graded by testing the generated file `dept-prof-updated.pydata`.**(15 marks)**

Your program should contain the function with format shown as below:

```
def update():
```

(d) Implement a function to analyze the updated data in `dept-prof-updated.pydata` which we get from (c), and return a new `dictionary` where the keys are names of the departments and the value to each key is the number of its professors. **(15 marks)**

Your program should contain the function with format shown as below:

```
def get_depts_size():
```

Save your script for this exercise in `p3.py`

## Submission rules

1. Please name the `functions`, script files and data files with the **exact** names specified in this assignment and test all your scripts. Any script that has any wrong name or syntax error will not be marked.
2. For each group, please pack all your script files as well as the data files `dept-prof.pydata` and `dept-prof-updated.pydata` in Exercise 3 as a single archive named as
   `<student-id1>_<student-id2>_lab3.zip`
   For example, `1155012345_1155054321_lab3.zip`, i.e., just replace `<student-id1>` and `<student-id2>` with your own student IDs. If you are doing the assignment alone, just leave `<student-id2>` empty, e.g, `1155012345_lab3.zip`.
3. Send the zip file to `cuhkcsci2040@gmail.com`,
   - Each group only needs to send one Email
   - Subject of your Email should be `<student-id1>_<student-id2>_lab3` if you are in a two-person group or `<student-id1>_lab3` if not.
   - No later than 23:59 on Fri. Oct. 19th, 2018
4. Students in the same group would get the same marks. Marks will be deducted if you do not follow the submission rules. Anyone/Anygroup who is caught plagiarizing would get 0 score!
5. If you have any question regarding **Lab Assignment 3**, please email to syzheng@cse.cuhk.edu.hk.
